

RoboWatch – Remote Solutions

Originally developed to prevent theft, vandalism and trespass in the construction industry, RoboWatch replaces the need for on site security personnel.

Based on remote monitored CCTV, this cost-effective system acts as a powerful deterrent to would be criminals, and is also highly successful at detecting and dealing with intruders, who are challenged via an audio link.

We can install RoboWatch cameras to cover all the vulnerable areas of your site. These systems are regularly maintained and tested to ensure they are working correctly.

RoboWatch – Remote Solutions

Each camera is fitted with a highly sensitive detector, which is activated by the slightest movement. The detector then transmits an instant signal to the control room, where one of our trained operators is able to view live pictures of your site.

As soon as an intruder is detected, the controller responds by issuing an audio communication, warning the intruder to leave the site immediately. Simultaneously, local police are alerted. Total on site security is maintained after all workers have left.

Because the RoboWatch system is constantly recording images, incidents can be played back even when you are not actively viewing the site. This means that you can be sure that all incidents, however small, are investigated and reported.
